Energy Savings Estimate – Draft Cap Attic Stairs Insulator

MFG: Attic Cap Corp.
PO Box 542
Ashland, MA 01721

Patent Issued

The Association for Better Insulation has tested the Attic Cap Corp Attic Stair Insulator sold under the brand name of Draft Cap.

The purpose of this report is to qualify monthly energy savings of this product installed according to manufacturer's recommendations.

Summary: Savings of approximately \$19.26 per month were demonstrated using conservative temperature differentials between the conditioned living spaces and the attic space. Actual savings may vary according to local temps and the quality of seal and installation provided. Thus, it is fair to assume these figures to be conservative overall.

Figures assume average \$0.000026/BTU costs and an annual temperature range of 32 degrees F as the low and 75 degrees F as a high temp.

This translated to an average savings of \$19.26 per month at the time of testing.

This test was in response to many of our subscribers and visitors asking for a quantitative report on the effectiveness of attic stairs insulators in general. We tested Draft Cap by Attic Cap Corp only and these results only apply to this product, but should be indicative of the product genre in general.

As Draft Cap is the only PATENTED attic stairs insulator we could find, we recommend it as a device to use as a Better Insulation product for your home.
