

# INSTALLATION INSTRUCTIONS

**SINGLE  
DOOR**

## SINGLE Door Kit Includes:

- (1) 4'x25' Double Bubble Foil Insulation
- (1) 100' Roll of Double-sided Tape
- Installation Instructions

*Kit Includes Enough Material For  
Garage Doors Up To 12' x 8'*

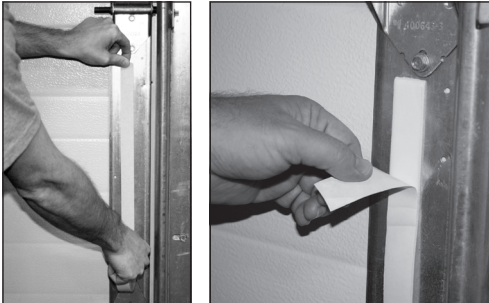

**DOUBLE  
DOOR**

## DOUBLE Door Kit Includes:

- (1) 4'x35' Double Bubble Foil Insulation
- (1) 100' Roll of Double-sided Tape
- Installation Instructions

*Kit Includes Enough Material For  
Garage Doors Up To 16' x 8'*

Tools Required: Sharp utility knife and step ladder

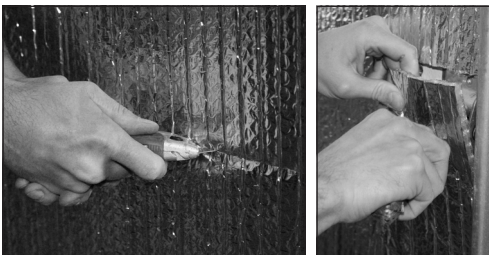

**IMPORTANT:** For best results, double sided tape should be applied when temperatures are between 65°F - 100°F. Also be sure that the surface is clean and dry before applying tape.

1. Attach double sided tape to all vertical and horizontal framework of the door. Remove the release liner from the double sided tape.

2. Roll insulation horizontally across the bottom sections keeping it tight and pressing firmly against the tape. At the end of the door, cut the insulation and trim edges if necessary.

Optional method: You can also measure the width of the door and pre-cut the insulation to length before installing.

3. To prevent buckling of the product during door operation, slice a seam where the door panels separate. (For a tighter fit, you may also want to trim around the door brackets that secure the panels together.)

4. Repeat step 2 for the top section.
